 Pred. No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being pr
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group 1 molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCLC-2, encoding human SOX1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encoded isolated nucleic acid comprising an NA Group 3 or 4 molecule -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     population. The method comprises: (a) detecting Sox1 gene expression in the cells; and (b) isolating those cells expressing Sox1. Also described is a method for producing a cell committed to the neuronal lineage, comprising: (a) transfecting a pluripotent stem cell with a genetic construct encoding Sox1 expression; (b) culturing the stem cells to differentiate into neural cells; and (c) isolating those neural cells produced. The present sequence encodes human Sox1. Detection of Sox1 expressing cells important in diagnosing and treating cancers of the neurological disorders, especially for repair of accidentally induced trauma in the CNS or for correction of congenital or pathological diseases of the CNS. A patient with a neurological disorder can act as self-donor. Cells may be isolated from the patient and either sorted to extract neuroblasts, or treated in order to differentiate neuroblasts,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolating neuroblastic cells from a population - by detecting the expression of the Soxl gene in the cells and sorting the cells to isolate those cells expressing Soxl
                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1542 BP; 238 A; 565 C; 560 G; 179 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
A method has been developed for isolating neuroblastic cells from a cell population. The method comprises: (a) detecting Soxl gene expression in the cells; and (b) isolating those cells expressing Soxl. Also described is a method for producing a cell committed to the neuronal lineage, comprising: (a) transfecting a pluripotent stem cell with a genetic construct encoding Soxl expression; (b) culturing the stem cells to differentiate into neural cells; and (c) isolating those neural cells produced. The present sequence represents mouse Soxl cDNA. Detection of Soxl expressing cells is important in diagnosing and treating cancers of the nervous system. Neural stem cells are useful for the treatment of neurological disorders, especially for repair of accidentally induced

A patient with a neurological disorder can act as self-donor. Cells may be isolated from the patient and either sorted to extract neuroblasts, or treated in order to differentiate neuroblasts, from specific or general precursors.

The method comprises: (a) detecting Sox1 gene expression in the cells; and (b) isolating those cells expressing Sox1. Also described is a method for producing a cell committed to the neuronal lineage, comprising: (a) transfecting a pluripotent stem cell with a genetic construct encoding Sox1 expression; (b) culturing the stem cells to differentiate into neural cells; and (c) isolating those neural cells produced. The present sequence represents chicken Sox1 cDNA. Detection of Sox1 expressing cells is important in diagnosing and treating cancers of the nervous system. Neural stem cells are useful for the treatment of neurological disorders, especially for repair of accidentally induced trauma in the CNS or for correction of congenital or pathological diseases of the CNS. A patient with a neurological disorder can act as self-donor. Cells may be isolated from the patient and either sorted to extract neuroblasts, or treated in order to differentiate neuroblasts,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolating neuroblastic cells from a population - by detecting the expression of the Soxl gene in the cells and sorting the cells to isolate those cells expressing Soxl

The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can bused in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group I molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head
                                                                                                                                                                                                                                                                                                                                                                                                           Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encoded isolated nucleic acid comprising an NA Group 3 or 4 molecule -
                                                                                                                                                                                                                                                                                                                                                         Claim 57; Page 87; 152pp; English.

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating

            The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM830302) that exhibit activity elating cytokine, cell proliferation or cell differentiation or which may induc production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines o peptide therapy. The polypeptides have various cytokine-like activities e.g. stem cell growth factor activity, haematoppiesis regulating
    activity,

The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI9913 and ABI9914 represent PCR primers for a mouse ischaemic condition related sequence, which are used to the complete account of the condition related sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a ChAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group 1 molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCIC-9, encoding human SOX3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encoded isolated nucleic acid comprising an NA Group 3 or 4 molecule -

                                                                    Дb
                                                                                                    δÃ
                                                                                                                                                                                                                                            CC The invention relates to isolated polynucleotide (I) and CC polymerase (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCR) primers (II) is useful from the production of (II). The CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC afood supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations of the produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO at figure in the printed constitution in the printed constitution.

The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein encoded by a nucleic acid (NA) Group 1 molecule. The disorders are small and non-small cell lung cancer, medanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a small cell lung cancer associated gene designated as NY-SCLC-10, encoding human SOX21 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel isolated lung small cell cancer antigen CC polynucleotides (I) and polypeptides (II) used in a method of detecting CC cancer in a patient. The method is optionally performed by CC utilising oligonucleotides (III), where the biological sample CC irom the patient is contacted with (III), detecting the amount of polynucleotide to (III) in the sample and comparing the CC amount of polynucleotide to a predetermined cut-off value and thereby CC determining cancer in a patient. (I), (II) or antigen-presenting cells CC expressing (II) is useful for stimulating and/or expanding T cells CC expressing (II) is useful for stimulating and/or expanding T cells CC specific for a tumour protein. The method comprises contacting T cells CC and/or expansion of the components under conditions to permit the stimulation CC and/or expansion of the cells. A composition comprising (I) is useful for stimulating an immune response in a patient and for inhibiting the development of cancer in a patient. An CC isolated T cell population is useful for removing tumour cells from the biological sample and for inhibiting the development of cancer in a patient. Ansolated A
